

Here at Grow Op Farms we use only approved PICOL listed products and follow strict standard operating procedures as it pertains to integrated pest management (IPM) during the grow process.

Depending on IPM needs, some of these products may or may not have been used prior to flowering:

- Azagard
- Nukem
- PFR 97
- Grandivo
- Botanigard Maxx
- Safer brand 3n1 liquid sulfur
- ZerotoI
- Regalia PTO
- Gnatrol

All of our grow rooms are flushed for a full 14-21 days and independently pesticide tested. Trace Analytics and/or Confidence Analytics staff comes in and hand selects random live samples out of the grow rooms for these tests prior to harvest.

We make it our priority to ensure that you are receiving the best quality and safest products on the market by being the only company in the state that tests all material in our facility whether grown in house or procured by Dabstract or Snickle Fritz.

In the two years we have had this SOP in place we have never failed a test, and are proud to boast all of our products are pesticide free.

Grow Op Farms has every harvest independently pesticide tested by the most reputable labs in the state of Washington.
